SUMMARY

Senior DevOps / Cloud Engineer with 5+ years across network, systems and cloud in banking, custody and enterprise IT. Today I deploy services on Amazon EKS, maintain the Jenkins pipelines behind them, and harden RHEL fleets to CIS benchmarks. Before that: Terraform and Ansible AAP in a regulated bank, and AWS network design and presales. I also build and run five of my own products in production.

TECHNICAL SKILLS

Cloud	AWS (EKS, EC2, ECS, VPC, Transit Gateway, IAM, SSO, S3), IBM Cloud VPC/VSI, Microsoft Azure
Containers & CI/CD	Kubernetes / Amazon EKS, Docker, Helm, Jenkins, GitLab CI
IaC & Automation	Terraform, Ansible & Ansible Automation Platform (AAP), Bash, Python
Observability	Splunk, Grafana, Prometheus, Loki, Apache Kafka
Security & Compliance	CIS Benchmarks, OpenSCAP / SCAP Security Guide, SELinux, auditd, PAM/authselect, vulnerability assessment, 2FA
Networking	Nginx, HAProxy, Squid Proxy, Cisco (DNA Center, ISE, WLC), Fortigate, Sophos, pfSense, OPNsense
Systems	RHEL, Ubuntu, Windows Server, VMware ESXi & vCenter

PROFESSIONAL EXPERIENCE

Senior DevOps Specialist — Mar 2026 – Present

Orbix Custodian · Bangkok

- Coordinate releases across application, infrastructure and security teams, from change window to post-release follow-up.
- Deploy and troubleshoot services on an existing Amazon EKS platform; maintain the Jenkins pipelines that build and ship into it.
- Led the migration of workloads from IBM Cloud back to on-premises, including cutover, with application owners.
- Support the Kafka event-streaming layer and use Splunk to trace service and release issues end to end.
- Automated RHEL 9 hardening and CIS scanning with Ansible and OpenSCAP. The audit report comes out of the same run, and fleet compliance rose from the low 80s to near-full.

Freelance DevOps & Cloud Engineer — Jan 2026 – Feb 2026

Self-employed · Fastwork (@gitops)

- Delivered Linux server setup, containerized deployments with Docker and Nginx, and CI/CD pipelines for clients.
- Built, deployed and operated my own SaaS products on self-managed VPS infrastructure (Docker, PM2, systemd, Cloudflare).

DevOps Engineer — Mar 2025 – Dec 2025

Krungsri (Bank of Ayudhya) · Bangkok

- Designed and maintained modular Terraform infrastructure so development and production stayed consistent between releases.
- Developed Ansible Automation Platform (AAP) playbooks for server provisioning and configuration, replacing manual build steps in a regulated banking environment.
- Standardized containerized deployments with Docker and owned the infrastructure side of releases across multiple environments.

Cloud Engineer — Jul 2024 – Feb 2025

Mobileconnect · Bangkok

- Designed and implemented secure AWS network architectures with VPC and Transit Gateway, with access enforced through IAM and SSO.
- Led AWS presales: architecture recommendations, high-level designs and cost-optimization proposals for clients.
- Ran cloud migrations end to end, deployed containerized workloads on Amazon ECS, and automated provisioning and day-2 operations with Terraform and Ansible AAP.

Cloud Engineer — Dec 2023 – Jul 2024

Fujitsu (Thailand) Co., Ltd. · Bangkok

- Operated hybrid environments spanning AWS, Microsoft Azure and on-premises infrastructure for enterprise clients.
- Implemented and maintained HAProxy and Squid Proxy to control traffic flow and tighten egress security.
- Delivered new network-zone design and cloud-migration workstreams, owning CAB change requests and incident reports.

Network System Engineer — Oct 2022 – Oct 2023

Tri Petch IT Solutions Co., Ltd.

- Automated 20+ recurring manual tasks with scripting, including monthly system reporting.
- Managed enterprise networks on Cisco DNA Center, ISE, WLC and access points; administered VMware ESXi/vCenter and Windows/Linux servers.
- Ran vulnerability assessment scans and rolled out two-factor authentication (Rublon).

Network System Engineer May 2021 – Sep 2022

Pro Inside Co., Ltd.

- Configured Cisco and Huawei switching (VLAN, trunking) and managed Sophos and Fortigate firewalls for client sites.
- Deployed open-source firewalls (OPNsense, pfSense, IPFire) and managed virtualization and storage on VMware ESXi and vCenter.

INDEPENDENT PRODUCTS

Built, deployed and operated solo on my own VPS (Nginx, Docker, PM2, systemd, Cloudflare) · korvuz.site

- **InvoiceAI.th** — Thai invoicing SaaS with AI-assisted data entry, live with Stripe billing.
- **LineCRM** — CRM inside LINE Official Account for Thai retailers (Next.js, PostgreSQL).
- **FiatLine** (personal finance LINE mini-app), **English Reader** (reading practice app), **DevOps KB** (knowledge base and 90-day CI/CD & SRE roadmap).

EDUCATION

Bachelor of Computer Science — Mahasarakham University 2016 – 2019

Developer Intern — CETA Testsysteme GmbH, Germany · Laravel, Angular Dec 2020 – Mar 2021
